

KENSINGTON F U N D S

Kensington Credit Opportunities ETF (KAMO)

Summary Prospectus
December 15, 2025

Listed on Cboe BZX Exchange, Inc.

Before you invest, you may want to review the Kensington Credit Opportunities ETF's (the "Fund") prospectus, which contains more information about the Fund and its risks. The current Statutory Prospectus and Statement of Additional Information dated December 15, 2025, are incorporated by reference into this Summary Prospectus. You can find the Fund's Statutory Prospectus, Statement of Additional Information, reports to shareholders and other information about the Fund online at <http://www.kensingtonassetmanagement.com/funds/documents>. You can also get this information at no cost by calling the Fund (toll-free) at 866-303-8623.

KENSINGTON CREDIT OPPORTUNITIES ETF

Investment Objective: The Kensington Credit Opportunities ETF (KAMO) (the “Fund”) seeks income and capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Examples below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees ⁽¹⁾	0.85%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ⁽²⁾	0.00%
Acquired Fund Fees and Expenses ⁽²⁾	0.09%
Total Annual Fund Operating Expenses	0.94%

(1) Kensington Asset Management, LLC (the “Adviser”) has agreed to pay all expenses of the Fund, except for: (i) brokerage expenses and other fees, charges, taxes, levies or expenses incurred in connection with the execution of portfolio transactions or in connection with creation and redemption transactions; (ii) fees or expenses in connection with any arbitration, litigation or pending or threatened arbitration or litigation, including any settlements in connection therewith; (iii) extraordinary expenses; (iv) distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (“1940 Act”); (v) interest and taxes of any kind or nature; (vi) any fees and expenses related to the provision of securities lending services; (vii) the advisory fee payable to the Adviser; (viii) Acquired Fund Fees and Expenses; and (ix) all costs incurred in connection with shareholder meetings and all proxy solicitations (except for such shareholder meetings and proxy solicitations related to: (a) changes to the Adviser’s investment advisory agreement, (b) changes in control at the Adviser, (c) the election of any Board member who is an “interested person” of the Adviser (as that term is defined under Section 2(a)(19) of the 1940 Act), (d) matters initiated by the Adviser, or (e) any other matters that directly benefit the Adviser).

(2) Other Expenses and Acquired Fund Fees and Expenses (“AFFE”) are estimated since the Fund had not launched as of the date of this prospectus. AFFE are indirect costs of investing in other investment companies. The operating expenses in this fee table do not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund and not the indirect costs of investing in other investment companies.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years
\$96	\$300

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account at the shareholder level. These costs, which are not reflected in annual fund operating expenses or in the example above, affect the Fund’s performance. No portfolio turnover rate is provided for the Fund because the Fund had not commenced operations prior to the date of this Prospectus.

Principal Investment Strategies

The Fund invests, under normal circumstances, at least 80% of its assets (including the amount of borrowings for investment purposes) in (1) U.S. and non-U.S. fixed income securities; and (2) exchange-traded funds and derivatives instruments that provide long and short exposure to U.S. and non-U.S. fixed income securities. The Fund focuses on lower-quality, higher-yielding securities across a wide range of investable asset classes using both long and short exposures. The Fund will gain exposure to fixed income securities primarily by investing in one or more of the following investment types:

- Other exchange-traded funds (“ETFs”);
- Individual bonds (or baskets of bonds);

- Bond futures; and
- Credit default swaps, credit default index swaps, and options on such instruments.

The Fund will typically seek exposure among a wide range of fixed income segments, including the following:

Lower Grade Fixed Income

- High-yield corporate bonds
- Leveraged loans, senior loans and bank loans
- Convertible bonds

Higher Grade Fixed Income

- Investment-grade corporate bonds
- Asset-backed securities, including mortgage-related securities and mortgage-backed securities
- U.S. Treasury securities

Peripheral Asset Classes

- Emerging market bonds
- Publicly-traded Business Development Companies (“BDCs”)
- High dividend equity securities

The Fund is designed to provide an actively-managed solution across various sectors of fixed income using Kensington’s investment process. The Fund will generally feature a blended portfolio that increases or decreases exposure across target asset classes. The Fund may use both long or short exposures to manage duration and credit risk through a two-step process that involves quantitative analysis on different aspects of fixed income investing, as well as risk management.

The Fund’s quantitative analysis process incorporates four distinct categories: Trends, Valuation, Macro Environment, and Pricing and Flow Anomalies, using a quantitative approach with the following rationales:

Trends The trend-following component of the Fund utilizes numerous inputs, such as par weighted index price, yields, total return index, and credit spreads. For each input, features are generated across long, medium, and short timeframes to obtain a final trend signal. The objective is to capture the essence of trends as they occur. Frequent changes are to be expected but other process components seek to mitigate this volatility.

Valuation This component is an inherently counter-trend or contrarian framework designed to complement trend-following. This aspect of the process is designed to identify areas of relatively “cheap” versus “expensive” valuations, based on historical data. This component is designed to allow the Fund to be more risk-conscious when valuations are overpriced and to identify possible counter-trend buying opportunities when valuations are at extreme historical lows.

Macro Environment This analysis considers factors from different asset classes, such as equities and commodities. The portfolio managers believe that including a “macro-aware” framework can potentially improve allocation guidance and risk-adjusted performance. For example, rising commodity, government bond, and equity prices typically show strong or improving economic growth, whereas falling bond and equity prices but rising commodity prices could be an indicator of a “stagflationary” regime.

Pricing and Flow Anomalies Investor timing and behavior can lead to trading anomalies that produce regular periods of lower or higher-than-average expected returns. Kensington’s quantitative process is designed to identify these periods, and plays a role in determining asset allocation when combined with the other indicator subsets.

After using these analyses to generate forecasts of expected future performance for asset classes, quantitative portfolio optimization techniques that weigh forecasts of expected future performance and risk given real life constraints like turnover, transaction costs and slippage are applied to obtain asset class allocations in the portfolio.

Shorting / Inverse Position: In addition to these four categories, the Fund's quantitative model contains signals to short exposures primarily in two asset classes: U.S. Treasuries and U.S. high-yield bonds. Shorting will be typically achieved through the usage of futures contracts for U.S. Treasuries. For U.S. high-yield bonds, the Fund may short ETFs, purchase credit default swaps or utilize other derivatives, such as options and futures.

The Fund is flexible and not managed to a benchmark. The Fund may shift its allocations based on changing market conditions, which may result in investing in a single or multiple markets and sectors. The Fund has broad flexibility to invest in a wide variety of debt securities and instruments of any maturity. The Fund may invest in fixed and floating rate debt securities issued in both U.S. and foreign markets, including countries whose economies are less developed (emerging markets). The Fund has discretion to focus its investments in one or more regions or small groups of countries including both U.S. and foreign markets including emerging markets. The Fund invests primarily in U.S. dollar denominated securities, although the Fund may also invest in non-dollar denominated securities. The fixed-income securities to which the Fund may have exposure are not restricted as to issuer credit quality, country, capitalization, security maturity, currency, or leverage.

The Fund will typically have significant exposure to high-yield securities, which are debt instruments rated lower than Baa3 by Moody's Investors Service, Inc. ("Moody's") or lower than BBB- by Standard and Poor's Rating Group ("S&P"), or, if unrated, determined by the Adviser, or the underlying fund's adviser where applicable, to be of similar credit quality. High-yield securities are also known as "junk bonds." The Fund may have exposure to junk bonds that are in default, subject to bankruptcy or reorganization. The Fund may also take short positions from time to time to hedge or offset existing long positions.

The Fund may hold cash or cash equivalents or invest directly or indirectly in underlying funds that invest in U.S. Treasury securities of various maturities.

A portion of the Fund's assets may be invested in asset-backed securities, mortgage-related securities and mortgage-backed securities. Such securities may be structured as collateralized mortgage obligations (CMOs) and stripped mortgage-backed securities, including those structured such that payments consist of interest-only (IO), principal-only (PO) or principal and interest. The Fund also may invest in inverse floaters and inverse IOs, which are debt securities with interest rates that reset in the opposite direction from the market rate to which the security is indexed. The Fund may also invest in structured investments and adjustable rate mortgage loans (ARMs). The Fund may invest a portion of its assets in sub-prime mortgage-related securities.

In selecting underlying funds, the Adviser considers the performance, relative fees, management experience, and underlying portfolio composition and strategy of such underlying funds.

While the Fund has no present intention to do so, the Fund may be invested in securities that become illiquid investments, which may include securities that are not readily marketable and securities that are not registered under the Securities Act. The Fund may not acquire any illiquid investments if, immediately after the acquisition, the Fund would have invested more than 15% of its net assets in illiquid investments that are assets.

The Fund is non-diversified, which means it may invest a high percentage of its assets in a limited number of securities. The Fund will typically limit its investment in a single underlying fund to three percent of such underlying fund's net assets, although the percentage of such underlying fund owned by the Fund may change over time as the value of such investment changes and the Fund's overall portfolio changes.

The Fund may lend its portfolio securities to brokers, dealers, and other financial organizations. These loans, if and when made, may not exceed 33 1/3% of the total asset value of the Fund (including the loan collateral). By lending its securities, the Fund may increase its income by receiving payments from the borrower.

Principal Investment Risks

As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program. Many factors affect the Fund's net asset value and performance. The following risks apply to the Fund directly and indirectly through the Fund's investment in underlying funds.

- *Management Risk.* The Adviser's reliance on its proprietary investment process and the Adviser's judgments about the attractiveness, value, and potential appreciation of particular assets and asset classes may prove to be incorrect and may not produce the desired results.

- *Models and Data Risk.* The Fund’s investment exposure is heavily dependent on proprietary quantitative models as well as information and data supplied by third parties (“Models and Data”). When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon may lead to securities being included in or excluded from the Fund’s portfolio that would have been excluded or included had the Models and Data been correct and complete. Some of the models used by the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund.
- *High-Yield Bond Risk.* Lower-quality fixed income securities, known as “high-yield” or “junk” bonds, present greater risk than bonds of higher quality, including an increased risk of default. These securities are considered speculative. Defaulted securities or those subject to a reorganization proceeding may become worthless and are illiquid.
- *Fixed-Income Securities Risks.* The Fund may invest in or have exposure to fixed-income securities. Fixed-income securities are or may be subject to interest rate, credit, liquidity, prepayment and extension risks. Interest rates may go up resulting in a decrease in the value of fixed-income securities. Credit risk is the risk that an issuer will not make timely payments of principal and interest. There is also the risk that an issuer may “call,” or repay, its high-yielding bonds before their maturity dates. Fixed-income securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. Limited trading opportunities for certain fixed-income securities may make it more difficult to sell or buy a security at a favorable price or time. Changes in market conditions and government policies may lead to periods of heightened volatility and reduced liquidity in the fixed-income securities market, and could result in an increase in redemptions. Interest rate changes and their impact on the Fund and its share price can be sudden and unpredictable.
 - *Interest Rate Risk.* In times of rising interest rates, bond prices will decline. Generally, securities with longer maturities and funds with longer weighted average maturities carry greater interest rate risk. The Fund may be exposed to heightened interest rate risk as interest rates rise from historically low levels.
 - *Extension Risk.* In times of rising interest rates, prepayments will slow causing portfolio securities considered short or intermediate term to be long-term securities, which fluctuate more widely in response to changes in interest rates than shorter term securities.
 - *Liquidity Risk.* There may be no willing buyer of the Fund’s portfolio securities and such fund may have to sell those securities at a lower price or may not be able to sell the securities at all, each of which would have a negative effect on performance.
 - *Prepayment Risk.* In times of declining interest rates, the Fund’s higher yielding securities may be prepaid and such fund may have to replace them with securities having a lower yield.
 - *Duration Risk.* The Fund can invest in securities of any maturity or duration. Duration is a measure of sensitivity of a security’s price to changes in interest rates. For example, a security with a duration of 2.0 would be expected to decrease in price 2% for every 1% rise in interest rates (the inverse is true as well). Holding long duration and long maturity investments will magnify certain risks, including interest rate risk and credit risk.
- *ETF Risks.* The Fund is an ETF, and, as a result of an ETF’s structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Cash Redemption Risk.* While not expected to be a regular occurrence, the Fund’s investment strategy may require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling shares, including brokerage commissions imposed by brokers and bid-ask spreads, frequent trading of shares may significantly reduce investment results and an investment in shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of shares will approximate the Fund’s NAV, there may be times when the market price of shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund may trade on foreign exchanges that are closed when the Fund’s primary listing exchange is open, there are likely to be deviations between the current price of a security and the security’s last quoted price from the closed foreign market. This may result in premiums and discounts that are greater than those experienced by domestic ETFs.
- *Trading.* Although shares are listed for trading on the NYSE Cboe BZX Exchange, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than shares, and this could lead to differences between the market price of the shares and the underlying value of those shares.
- *Business Development Company (“BDC”) Risk.* There are certain risks inherent in investing in BDCs, whose principal business is to invest in, and lend capital or provide services to privately held companies. BDCs are regulated under the 1940 Act and are subject to certain restraints. For example, BDCs are required to invest at least 70% of their total assets primarily in securities of private companies or thinly traded U.S. public companies, cash, cash equivalents, U.S. government securities and high quality debt investments that mature in one year or less. Because little public information exists for private and thinly traded companies in which a BDC may invest, there is a risk that investors may not be able to make a fully informed investment decision. In addition, investments made by BDCs are typically illiquid and may be difficult to value. A BDC may only incur indebtedness in amounts such that the BDC’s asset coverage, subject to certain conditions, equals at least 150% after such incurrence. These limitations on asset mix and leverage may prohibit the way that the BDC raises capital.
- *Foreign Investment Risk.* Foreign investments may be riskier than U.S. investments for many reasons, such as changes in currency exchange rates and unstable political, social, and economic conditions.
- *Emerging Market Risk.* The Fund intends to have exposure to emerging markets. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative.
- *Currency Risk.* Changes in currency exchange rates may negatively affect the value of the Fund’s investments. Fluctuations in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund’s investments in securities denominated in a foreign currency or may widen existing losses.
- *Geographic Focus Risk.* The Fund may focus its investments in one or more regions or a limited number of countries. As a result, the Fund’s performance may be subject to greater volatility than a more geographically diversified fund.
- *Loans Risk.* The market for loans, including bank loans, loan participations, and syndicated loan assignments may not be highly liquid, and the holder may have difficulty selling them. These investments expose the Fund to the credit risk of both the financial institution and the underlying borrower. Bank loans settle on a delayed basis, which can be greater than seven days, potentially leading to the sale proceeds of such loans not being available for a substantial period of time after the sale of the bank loans.
- *Distribution Risk.* The Fund is not designed to provide a predictable level of dividend income. The income payable on debt securities in general and the availability of investment opportunities varies based on market conditions. In addition, the Fund may not be effective in identifying income producing securities and managing distributions; as a result, the level of dividend income will fluctuate. The Fund’s investments are subject to various risks including the risk that the counterparty will not pay income when due which may adversely impact the level and volatility of dividend income paid by the Fund. The Fund does not guarantee that distributions will always be paid or that such dividends will not fluctuate.
- *Market Risk.* Overall investment market risks affect the value of the Fund. Factors such as economic growth and market conditions, interest rate levels, and political events affect U.S. and international investment markets. Additionally, unexpected

local, regional or global events, such as war; acts of terrorism; financial, political or social disruptions; natural, environmental or man-made disasters; the spread of infectious illnesses or other public health issues (such as the global pandemic coronavirus disease 2020 (COVID-19)); and recessions and depressions could have a significant impact on the Fund and its investments and may impair market liquidity. Such events can cause investor fear, which can adversely affect the economies of nations, regions and the market in general, in ways that cannot necessarily be foreseen.

- *Underlying Funds Risk.* Investments in underlying funds involve duplication of investment advisory fees and certain other expenses. Each underlying fund is subject to specific risks, depending on the nature of its investment strategy. The manager of an underlying fund may not be successful in implementing its strategy. ETF shares may trade at a market price that may be lower (a discount) or higher (a premium) than the ETF's net asset value. ETFs are also subject to brokerage and/or other trading costs, which could result in greater expenses to the Fund. Because the value of ETF shares depends on the demand in the market, the Adviser may not be able to liquidate the Fund's holdings at the most optimal time, adversely affecting performance.
- *Derivatives Risk.* In general, a derivative instrument typically involves leverage, *i.e.*, it provides exposure to potential gain or loss from a change in the level of the market price of the underlying security (or a basket or index) in a notional amount that exceeds the amount of cash or assets required to establish or maintain the derivative instrument. Adverse changes in the value or level of the underlying asset or index, which the Fund may not directly own, can result in a loss to the Fund substantially greater than the amount invested in the derivative itself. The use of derivative instruments also exposes the Fund to additional risks and transaction costs. A risk of the Fund's use of derivatives is that the fluctuations in their values may not correlate perfectly with the overall securities markets.
 - *Futures Contract Risk.* The successful use of futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts, which may adversely affect the Fund's NAV and total return, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the futures contract; (b) possible lack of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
 - *Credit Default Swap Agreements Risk.* The Fund may enter into credit default index swap agreements or credit default swap agreements as a "buyer" or "seller" of credit protection. Credit default index swap agreements and credit default swap agreements involve special risks because they may be difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty).
 - *Options Risk.* An option is an agreement that, for a premium payment or fee, gives the option holder (the purchaser) the right but not the obligation to buy (a "call option") or sell (a "put option") the underlying asset (or settle for cash an amount based on an underlying asset, rate, or index) at a specified price (the "exercise price") during a period of time or on a specified date. Investments in options are considered speculative. When the Fund purchases an option, it may lose the premium paid for it if the price of the underlying security or other assets decreased or remained the same (in the case of a call option) or increased or remained the same (in the case of a put option). If a put or call option purchased by the Fund were permitted to expire without being sold or exercised, its premium would represent a loss to the Fund.
- *Valuation Risk.* Valuation risk is the risk that the Fund has valued certain securities or positions at a higher price than the price at which they can be sold. There is no assurance that the Fund could sell a portfolio investment for the value established for it at any time, and the Fund may incur a loss because a portfolio investment is sold at a discount to its established value.
- *Short Sale Risk.* The Fund may take a short position in a derivative instrument, such as a futures contract. A short position on a derivative instrument involves the risk of a theoretically unlimited increase in the value of the underlying instrument which could cause the Fund to suffer a (potentially unlimited) loss. Short sales also involve transaction and financing costs that will reduce potential Fund gains and increase potential Fund losses.

- *Convertible Securities Risk.* Convertible securities are subject to the risks of stocks when the underlying stock price is high relative to the conversion price (because more of the security's value resides in the conversion feature) and debt securities when the underlying stock price is low relative to the conversion price (because the conversion feature is less valuable). The value of convertible securities may rise and fall with the market value of the underlying stock or, like a debt security, vary with changes in interest rates and the credit quality of the issuer. A convertible security is not as sensitive to interest rate changes as a similar non-convertible debt security, and generally has less potential for gain or loss than the underlying stock.
- *Mortgage Securities and Asset-Backed Securities Risk.* Mortgage securities differ from conventional debt securities because principal is paid back periodically over the life of the security rather than at maturity. The Fund may receive unscheduled payments of principal due to voluntary prepayments, refinancings or foreclosures on the underlying mortgage loans. Because of prepayments, mortgage securities may be less effective than some other types of debt securities as a means of "locking in" long-term interest rates and may have less potential for capital appreciation during periods of falling interest rates. A reduction in the anticipated rate of principal prepayments, especially during periods of rising interest rates, may increase or extend the effective maturity and duration of mortgage securities, making them more sensitive to interest rate changes, subject to greater price volatility, and more susceptible than some other debt securities to a decline in market value when interest rates rise. Issuers of asset-backed securities may have limited ability to enforce the security interest in the underlying assets, and credit enhancements provided to support the securities, if any, may be inadequate to protect investors in the event of default. Like mortgage securities, asset-backed securities are subject to prepayment and extension risks.
- *Leverage Risk.* As part of the Fund's principal investment strategy, the Fund may make investments in derivative instruments. These derivative instruments provide the economic effect of financial leverage by creating additional investment exposure to the underlying asset, as well as the potential for greater loss. If the Fund uses leverage through activities such as entering into derivative instruments, the Fund has the risk that losses may exceed the net assets of the Fund. The net asset value of the Fund while employing leverage will be more volatile and sensitive to market movements.
- *Non-Diversification Risk.* As a non-diversified fund, the Fund may invest more than 5% of its total assets in the securities of one or more issuers. The Fund also invests in underlying funds that are non-diversified. The Fund's performance may be more sensitive to any single economic, business, political or regulatory occurrence than the value of shares of a diversified investment company.
- *Turnover Risk.* A higher portfolio turnover may result in higher transactional and brokerage costs. The Fund's portfolio turnover rate may be significantly above 100% annually.
- *Securities Lending Risk.* There are certain risks associated with securities lending, including the risk that the borrower may fail to return the securities on a timely basis or even the loss of rights in the collateral deposited by the borrower, if the borrower should fail financially. As a result, the Fund may lose money. The Fund could also lose money in the event of a decline in the value of collateral provided for loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund.
- *U.S. Government Securities Risk.* The Fund may invest directly or indirectly in obligations issued by agencies and instrumentalities of the U.S. government. The U.S. government may choose not to provide financial support to U.S. government sponsored agencies or instrumentalities if it is not legally obligated to do so, in which case, if the issuer defaulted, the Fund might not be able to recover its investment.
- *Equity Securities Risk.* The Fund may invest in or have exposure to equity securities. Equity securities can be affected by macroeconomic and other factors affecting the stock market in general, expectations about changes in interest rates, investor sentiment towards equities, changes in a particular issuer's or industry's financial condition, or unfavorable or unanticipated poor performance of a particular issuer or industry. Prices of equity securities of individual entities also can be affected by fundamentals unique to the company or partnership, including earnings power and coverage ratios. An adverse event, such as an unfavorable earnings report, may depress the value of a particular common stock held by the Fund. In addition, prices of common stocks are sensitive to general movements in the stock market and a drop in the stock market may depress the price of common stocks. Common stock prices may fluctuate for several reasons including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, or the occurrence of political or economic events that affect the issuers. In addition, common stock prices may be particularly sensitive to rising interest rates, which increases borrowing costs and the costs of capital. Any of the foregoing risks could substantially impact the ability of such an entity to grow its dividends or distributions.
- *Dividend-Oriented Companies Risk.* Companies that have historically paid regular dividends to shareholders may decrease or eliminate dividend payments in the future. A decrease in dividend payments by an issuer may result in a decrease in the value of the issuer's stock and less available income for the Fund.

- *Tax Risk.* In order for the Fund to qualify as a regulated investment company under Subchapter M of the Code, the Fund must derive at least 90 percent of its gross income each taxable year from qualifying income. Income from certain commodity-linked derivative instruments in which the Fund invests is not considered qualifying income. The Fund will therefore restrict its income from direct investments in commodity-linked derivative instruments that do not generate qualifying income, such as commodity futures, to a maximum of 10 percent of its gross income
- *Limited History of Operations Risk.* The Fund has a limited history of operations for investors to evaluate. The Fund may fail to attract sufficient assets to operate efficiently.

Performance: As of the date of this Prospectus, the Fund does not have a full calendar year of performance as an ETF. When the Fund has been in operation for a full calendar year, performance information will be shown here. You should be aware that the Fund's past performance (before and after taxes) may not be an indication of how the Fund will perform in the future. Updated performance information and daily NAV per share is available at no cost by calling toll-free 866-303-8623 and on the Fund's website at <http://www.kensingtonassetmanagement.com/funds/documents>.

Investment Adviser: Kensington Asset Management, LLC

Portfolio Managers:

Patrick Sommerstad

Patrick Sommerstad serves as Portfolio Manager and Investment Committee Member for Kensington Asset Management. He has served the Fund since its inception in 2025.

Jason Sim

Jason Sim serves as Portfolio Manager and Investment Committee Member for Kensington Asset Management. He has served the Fund since its inception in 2025.

Jordan Flebotte

Jordan Flebotte serves as Portfolio Manager and Investment Committee Member for Kensington Asset Management. He has served the Fund since its inception in 2025.

Purchase and Sale of Fund Shares: The Fund will issue (or redeem) shares to certain institutional investors (typically market makers or other broker-dealers) only in blocks of shares known as "Creation Units." Creation Unit transactions are typically conducted in exchange for the deposit or delivery of in-kind securities and/or cash constituting a substantial replication, or a representation, of the securities included in the Fund's portfolio. Individual shares may only be purchased and sold on a national securities exchange through a broker-dealer. You can purchase and sell individual shares of the Fund throughout the trading day like any publicly traded security. The Fund's shares are listed on the Cboe BZX Exchange, Inc. (the "Exchange"). The price of the Fund's shares is based on market price, and because exchange-traded fund shares trade at market prices rather than net asset value ("NAV"), the Fund's shares may trade at a price greater than NAV (premium) or less than NAV (discount). Except when aggregated in Creation Units, the Fund's shares are not redeemable securities.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares of the Fund in the secondary market (the "bid-ask spread"). Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads is available on the Fund's website at <https://www.kensingtonassetmanagement.com/funds/documents>.

Tax Information: Distributions made by the Fund may be taxable to you as ordinary income or capital gains, unless you are a tax-exempt organization or are investing through a tax advantaged arrangement, such as a 401(k) plan or individual retirement account. Any withdrawals made from such tax advantaged arrangement generally will be taxable to you as ordinary income.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
